Suprit Saha
Assignment 2

March 4, 2015

1. Install the package **DAAG** and load the dataset **ais**
 - Extract the data for the rowers
 - Extract the data for the rowers, the netballers and the tennis players
 - Extract the data for the female basketballers and rowers
2. Create a sample dataframe having 6 rows and 6 columns - each of the following data type:
 - Character
 - numeric
 - logical
 - integer
 - factor

Extract each column and verify whether the data types are correct or not.
Convert the data frame to a list and assign it a name.
Reconvert the newly defined list to a dataframe

3. (*Difficult*) Create a 3*3 matrix and name it **11** and extract the diagonal elements
