

R Programming

Suprit Saha
Assignment 5-6

March 22, 2015

1. Create user defined function/functions :
 - (a) User can input any data
 - (b) The result will be two datasets :
 - One having quantitative variables
 - Other having categorical/character variables
 - (c) Use **stat.desc** to get descriptive statistics of quantitative variables
 - (d) Use **summary** to get descriptive statistics of quantitative variables
2. The folder **Assignment Six Question 2** has 4 files
 - (a) Each of the datasets contain 4 observations and three columns. Create a consolidated master dataset that will contain all 16 observations(4+4+4+4).Are there any duplicate observations? If so, remove them
 - (b) Get the following output:

Filename	Mean.Age	Mean.Height
123.csv		
234.csv		
345.csv		
456.csv		

The two columns : Mean.Age & Mean.Height will contain the mean of the 2 columns for each dataset.

Hint : Try `?list.files`,`?paste` . Note `paste(" Abc",1,sep="")=" Abc1"`
